

**Mating materials:**  
**Steel on heavy-duty bronze**  
**Maintenance required**

**Type G**  
 DIN ISO 12240-1  
 dimension series K

- Inner ring:** Antifriction bearing steel, hardened, ground and polished.
- Outer ring:** Outer diameter ground. Sliding face made of high-duty bronze. Lubricant is distributed via the lubricating groove in the outer ring.
- Lubrication:** The lubricant enters the lubricating groove through a cross hole in the outer ring.
- Special versions:** are available on request e.g.:  
 - Sliding face of inner ring hard chromium plated.

**Mating materials:**  
**Steel on heavy-duty bronze**  
**Maintenance required**

**Type S**  
**Special version**

- Inner ring:** Antifriction bearing steel, hardened, ground and polished.
- Outer ring:** Outer diameter ground. Sliding face made of high-duty bronze. Lubricant is distributed via the lubricating groove in the outer ring.
- Outer case:** Steel, outer diameter ground. Spherical bearing is pressed into the outer case and secured at both sides against axial movement. However the two outer rings should be axial supported at mounting.
- Lubrication:** The lubricant enters the lubricating groove through a cross hole in the outer case.
- Special versions:** are available on request e.g.:
  - Sliding face of inner ring hard chromium plated.
  - Outer case made of stainless steel.

**Mating materials:**  
**Steel on steel**  
**Maintenance required**

**RS**  
**Special version**  
**2RS sealing**

**Inner ring:** Antifriction bearing steel, hardened, ground and polished.

**Outer ring:** Made of heat-treated steel. Lubricant is distributed via the lubrication groove in the outer ring.

**Rubber bellows:** Synthetic rubber.

**Lubrication:** The lubricant enters the lubricating groove through a cross hole in the outer ring.

**Tolerances:** To DIN ISO 12240-1, schedule K, except:  $d = H8$ ,  $B = \pm 0.3$

**Note:** With these rod ends, it is important to ensure that the tilt angle specified in the table is not exceeded, either while mounting or during operation, otherwise the rubber bellows may be damaged. Replacement for previous 2RS-version. Available on request.

**Special versions:**

- Mating materials steel on high-duty bronze
- Mating materials steel on steel with anti-friction coating

**Mating materials:**  
**Steel on PFFE**  
**Maintenance-free**

**RS**  
**Special version**  
**RS sealing**

**Inner ring:** Antifriction bearing steel, hardened, ground and polished.

**Outer ring:** Steel lined with an antifriction film, consisting PTFE.

**Rubber bellows:** Synthetic rubber.

**Tolerances:** Acc. To DIN ISO 12240-1, schedule K, except:  $d = H8$ ,  $B = +0.3$

**Note:** With these rod ends, it is important to ensure that the tilt angle specified in the table is not exceeded, either while mounting or during operation, otherwise the rubber bellows may be damaged. Replacement for previous 2RS-version. Available on request.

**Mating materials:**  
**Steel on high-duty bronze**  
**Maintenance required**

**2RS version**  
**Special version**  
**2RS sealing**

- Inner ring:** Antifriction bearing steel, hardened, ground and polished.
- Bearing shells:** Sliding face made of high-duty bronze. Both shells have a male thread and are screwed into the housing. In this way, any required bearing clearance can be adjusted and then secured with the two vulcanised locknuts of the rubber bellows.
- Rubber bellows:** Synthetic rubber with vulcanised brass slipping and steel locknut
- Bushings:** Tempering steel, hardened, bore and outside diameter ground, pressed into the inner ring. They are only used as intake of the brass abrasive rings of the rubber bellows. Due to their low thickness they are not decicated to transmit radial and axial forces into the spherical bearing.
- Lubricating:** The lubricant enters the lubricating groove through a cross hole in the outer ring
- Tolerances:** To DIN ISO 12240-4, schedule K, except:  $d = H10$ ,  $B = \pm 0,3$
- Note:** With these rod ends, it is important to ensure that the tilt angle specified in the table ist not exceeded, either while mounting or during operation, otherwise the rubber bellows may be damaged.

**Mating materials:**  
**Steel on steel**  
**Maintenance required**

**HO2RS**  
**2RS-sealing**

- Inner ring:** Antifriction bearing steel, hardened, ground.  
**Outer ring:** Antifriction bearing steel, hardened, ground. Outer ring is split for assembly of inner ring.  
**Lubrication:** Lubrication groove and lubrication hole, relubrication is also possible through the inner bore.  
**Radial clearance:** see technical basics, table spherical bearings dimension series E, mating materials steel on steel.  
**Sealing:** Sealing rings at both sides.
